

The Litter is Growing with 3 New “SOFT” Flavors of Dogs Love Kale that include, Superfood Moringa!

At Super Zoo, **booth #3064**, one of the pet industry’s largest annual trade shows, Healthy Treats, Inc., will be launching three new DOGS LOVE KALE “SOFT” flavors, with all of the nutritional benefits of their first 8 flavors with superfood Moringa. Each is Wheat and Grain Free. Turkey/Salmon & Cranberry, Chicken & Sweet Potato and Beef & Apple.

Moringa, The Tree of Life is a super nutritious food which contains 46 antioxidants, 90 nutrients including high quality protein, calcium, trace minerals, iron, all essential amino acids and even iron. So it is a valuable addition to your diet and your pets diet. It helps boost the immune system and feeds joints and muscles to help prevent arthritis.

Dogs Love Kale uses a Cold Press process to produce our SOFT treats. This unique process creates a treat where natural enzymes, vitamins and fiber are retained, keeping all their healthy goodness. Our treats are cooked very quickly at 40-75°C, without the use of high temperatures or steam. This allows the essential nutrients in the ingredients to remain intact, producing a more nutritional product.

No animal by-products are included, which makes this treat a clean and safe snack for your pup. Kale is a super antioxidant that contains essential vitamins including: beta carotene, calcium, vitamin K, vitamin C, and lutein. Kale and Flaxseed aids in making your dog's coat softer and shinier, with healthier skin underneath. Flaxseed also provides fiber in your dog's diet.
