

## OASE Introduces Aquarium Filters with Integrated Heaters to North America

*Internal and External Filters with Integrated Heaters will debut at SuperZoo in Las Vegas on June 25th, 2018*

Las Vegas, NV – (May 30, 2018) – OASE, the global leader in water gardening technology, is pleased to introduce a new series of aquarium filters with integrated heaters to its impressive Indoor Aquatics line in North America. OASE Indoor Aquatic Thermo Filters have previously been available in Europe. The Indoor Aquatics line now offers a robust line of internal and external heated aquarium filters that are all backed by German engineering. The Thermo Filters will make their debut in North America at SuperZoo, in booth 3874, in Las Vegas on June 23.

OASE's internal and external aquarium filters now include integrated heating options for marine, tropical, and cold water temperature control. No longer do hobbyists need to see heaters creating visual distractions in their aquascapes and aquarium habitats. Integrated heaters can easily be adjusted, while keeping hands dry, on any of the Thermo Filters by utilizing the control system to provide uniform water temperature throughout the aquarium. Making the ideal aquatic environment is simpler than ever with the filtration and water temperature needs accounted for in one product.

“Thermo Filters are ideal for any aquarists who enjoy optimal filtration equipment along with an unobstructed view of the aquarium. Plus, temperature is easily adjustable for uniform water temperature and regulated by bi-metal technology,” says Caitlin Laclergue, Indoor Aquatics Product Manager for OASE in North America. Laclergue continues, “The integrated heating of OASE Thermo Filters makes for an incredibly unique and effective filtration system for your aquarium.”

BioPlus Thermo 50-200

FiltroSmart Thermo 100-300

BioMaster Thermo 250-600

In addition, the OASE line of HeatUp aquarium heaters can be integrated into the existing OASE aquarium filter models. This option is ideal for hobbyists who have started with an OASE cold water aquarium setup and would like to transition their system to a tropical or marine water setup without losing their valuable aquarium real estate to equipment.

**HeatUp- Adjustable heater with precision temperature control**

<p>For continuous operation suitable for fresh and marine water</p> 	<p>Control system for accurate readjustment</p> 	<p>Thermal switch for dry use protection and activated control light</p> 	<p>OASE bi-metal technology provides uniform temperature level</p>

## OASE biOrb® Samuel Baker New Aquarium Decor Debuts at SuperZoo

*Hand-detailed, aquatic-safe sculptures and décor provide the ideal combination of beauty and durability for the home aquarium.*

Las Vegas, NV – (May 30th, 2018) – OASE, the global leader in creative water design, is proud to announce its continued expansion into the indoor aquatics market with OASE biOrb's hand-crafted aquatic sculptures, décor and plants designed by aquatic décor designer, Samuel Baker. The new product will make its debut in North America at SuperZoo, in booth 3874, in Las Vegas, on June 23, 2018.

OASE biOrb sculptures are carefully reproduced from hand-crafted, detailed originals created by the aquatic décor designer, Samuel Baker. A design to suit every preference, from a mysterious treasure chest, submarine or shipwreck to seahorses on coral and gnarled life-like roots. Add in individual seahorse pieces and plastic and silk plants like the colorful bonsai balls, life-like seapearls, ambulia and dazzling parrots feathers to the mix and there is a seemingly endless array of combinations to enjoy and be creative with.

New décor in use within the biOrb CUBE

“It’s an organic process,” said Samuel Baker, biOrb aquatic décor designer. “I’ll start with a concept or an idea and I’ll bring in the elements I’ve found and I’ll start building up a composition. To me, it really comes to life during the painting process because all those things that I’ve seen and experienced and worked into the design, that’s when they come to the surface. The application of paint allows me to highlight and define those different elements. It all comes back to working with found objects. The re-creation of nature. I think people become consumed with the vastness of it all and things get missed and for me it’s the fine details which are really important and by singling them out and drawing them together we create these mini worlds inside. It’s about pulling them in and bringing them to life.”

Samuel Baker in studio

OASE biOrb sculptures are easily placed over the bubble tube to make for an exquisite centerpiece. Made from high-grade resin material, biOrb sculptures are also safe and durable for Freshwater, Saltwater and Tropical aquariums alike. The designer plants are conveniently weighted and are extremely easy to place and remain upright for a beautiful display.

The unique design of biOrb aquariums paired with the extensive assortment of sculptures, plants and décor; ranging from simplistically natural to excitingly colorful, truly make for a creative underwater world.

To learn more, visit the OASE biOrb® booth (3874) at SuperZoo or call 888-755-5646 to speak to an OASE representative.
